

Lineage Cell Therapeutics to Present at the Maxim Group 2024 Virtual Healthcare Summit

October 14, 2024

CARLSBAD, Calif.--(BUSINESS WIRE)--Oct. 14, 2024-- [Lineage Cell Therapeutics, Inc.](#) (NYSE American and TASE: LCTX), a clinical-stage biotechnology company developing allogeneic cell therapies for unmet medical needs, today announced that Brian M. Culley, Lineage's Chief Executive Officer, will be presenting at the [Maxim Group 2024 Virtual Healthcare Summit](#), in a fireside chat hosted by Jason McCarthy, Ph.D., Senior Managing Director, Head of Biotechnology Research. Lineage's fireside chat will be available for viewing on Tuesday, October 15, 2024, at 11:00 a.m. ET, for registered conference attendees.

About the Maxim Group 2024 Healthcare Virtual Summit

Maxim Senior Analysts will host a wide range of biotechnology, diagnostic, medical device, and healthcare information technology companies in a series of presentations and interactive discussions with CEOs and key management as well as several topical industry panels. For more information on the event and to register, please visit the conference website: <https://m-vest.com/events/healthcare-10152024>.

About Lineage Cell Therapeutics, Inc.

Lineage Cell Therapeutics is a clinical-stage biotechnology company developing novel, "off-the-shelf," cell therapies to address unmet medical needs. Lineage's programs are based on its proprietary cell-based technology platform and associated development and manufacturing capabilities. From this platform, Lineage designs, develops, manufactures, and tests specialized human cells with anatomical and physiological functions similar or identical to cells found naturally in the human body. These cells are created by applying directed differentiation protocols to established, well-characterized, and self-renewing pluripotent cell lines. These protocols generate cells with characteristics associated with specific and desired developmental lineages. Cells derived from such lineages are transplanted into patients in an effort to replace or support cells that are absent or dysfunctional due to degenerative disease, aging, or traumatic injury, and to restore or augment the patient's functional activity. Lineage's neuroscience focused pipeline currently includes: (i) OpRegen[®], a retinal pigment epithelial cell therapy in Phase 2a development under a worldwide collaboration with Roche and Genentech, a member of the Roche Group, for the treatment of geographic atrophy secondary to age-related macular degeneration; (ii) OPC1, an oligodendrocyte progenitor cell therapy in Phase 1/2a development for the treatment of spinal cord injuries; (iii) ReSonance[™] (ANP1), an auditory neuronal progenitor cell therapy for the potential treatment of auditory neuropathy; (iv) PNC1, a photoreceptor neural cell therapy for the potential treatment of vision loss due to photoreceptor dysfunction or damage; and (v) RND1, a novel hypoimmune induced pluripotent stem cell line being developed in collaboration with Eterna Therapeutics Inc.
